Full-Stack & Backend Developer · Automation Engineer

[linkedin.com/in/maged9090](https://www.linkedin.com/in/maged9090)

Giza, Egypt · Open to Remote / Relocation

github.com/maged909 · apify.com/maged120

SUMMARY

Backend and full-stack developer with 5 years of professional experience — most of it remote, with distributed teams — building and shipping production web systems. Core expertise across Laravel / PHP, Node.js / Express, and Vue.js, with strong automation skills in Python and Playwright. Published 59 Apify actors with 38,000+ total runs at a **98.2% success rate**. Fluent in English and proficient in Spanish (B2). Comfortable with AI-assisted tools such as Cursor and Claude Code as a productivity multiplier, backed by the fundamentals to architect, debug, and own systems independently.

EXPERIENCE

OSE For Logistics Services

2024 – Present

Full-Stack Senior Developer

Giza, Egypt

- Sole engineer behind a full freight-forwarding ERP (Laravel + Vue.js) used daily across 3 branches by 50+ staff — unifying operations, accounting, CRM, and HR in a single multi-currency platform
- Built a double-entry accounting engine from scratch (chart of accounts, journal entries, general ledger, multi-currency with FX revaluation, bank reconciliation, fixed assets, financial statements), replacing manual bookkeeping and cutting month-end close time by roughly 60%
- Implemented freight operations (shipments, claims, customer & supplier invoicing), a CRM pipeline (leads, RFQs, offers, email campaigns), and an HR/payroll module, all behind granular role-based access control
- Delivered three parallel projects alongside the core system (e-commerce site & dashboard, standalone freight API) while running live production servers as the sole engineer and stakeholder interface

Bee Interactive — Hosha Project

2022 – 2023

Back-End Developer

Remote

- Built Node.js / Express microservices for complex social-graph operations on Hosha, a social platform serving thousands of users, now live on the iOS App Store
- Modeled graph relationships in Neo4j and used MongoDB for general document storage
- Deployed and orchestrated all services with Docker and Kubernetes

ProMina Agency — St. Antony Project

2022

Full-Stack Developer

Remote

- Built a zero-code multilanguage engine: new languages activate instantly from the admin panel with no code changes or redeployment
- Migrated 10,000+ biblical and liturgical records into the platform's data model, building a reusable import pipeline to normalize and validate the source content

ProMina Agency — Dr. Germaine Project

2021 – 2022

Full-Stack Developer

Remote

- Built a medical-client website, admin dashboard, and REST API suite in Laravel and Vue.js

IGCSE Project

2021

Back-End Developer (Freelance)

Remote

- Designed data models, implemented JWT authentication, and built RESTful APIs for a web and mobile platform

WEB SCRAPING & AUTOMATION

Active Apify developer. 59 public actors | 38,000+ total runs | 1,100+ users | 98.2% success rate | 0.57 hr avg. response time

Featured actors

YouTube Video Details Scraper	17,400+	Google Search Scraper	4,800+
WhatsApp Number Checker	2,600+	TikTok Trending Topics	1,900+
Twitter / X Trends	1,700+	Amazon Reviews Scraper	1,400+

Built with [Crawlee](#), [Playwright](#), [Puppeteer](#), [Node.js](#), and [Python](#). apify.com/maged120

SELECTED PROJECTS

Quick Translator github.com/maged909/quick-translator

Native C# WinForms desktop translator (single ~75 KB executable, no SDK or runtime install). Global hotkey, multi-engine translation with automatic fallback, offline Windows OCR, SAPI text-to-speech, and a custom dark UI. Demonstrates low-level Windows integration (keyboard hooks, WinRT, named-pipe IPC) and lean engineering.

Windows PHP Switcher github.com/maged909/windows-php-switcher

Python CLI that switches between multiple PHP versions on Windows by rewriting the system PATH — filling a gap XAMPP doesn't handle natively. Menu-driven selection, JSON-configured installs, and automatic handling of the admin elevation needed to edit system environment variables.

Freeter Redesign github.com/maged909/freetest

TypeScript / Electron redesign of the Freeter productivity app — modern UI with dual accent colors, workspace export / import, and a clean component architecture.

TECHNICAL SKILLS

Backend	Laravel, Node.js / Express, PHP, REST API design, microservices
Frontend	Vue.js 3, Nuxt.js, Angular, HTML / CSS, Tailwind CSS
Automation	Apify, Crawlee, Playwright, Puppeteer, headless browsers, Python
Databases	MySQL, MongoDB, Neo4j
DevOps & Tools	Docker, Kubernetes, Linux administration, Git, CI / CD pipelines
AI-Assisted Dev	Cursor, Claude Code, prompt engineering for faster delivery
Programming	PHP, JavaScript, TypeScript, C#, Python, SQL

EDUCATION

Cairo University, Faculty of Arts	2020 – 2024
Bachelor of Arts, Spanish Language and Literature	Cairo, Egypt

LANGUAGES

Arabic — Native **English** — Fluent **Spanish** — B2, studied to degree level
